

Elma Laser 7 Zoom Laser rangefinder 150m digital sight

The Elma Laser 7 Zoom sets itself apart from other distance meters with its zoom-enabled camera, which clearly displays the target measured. This ensures that the instrument remains effective even in full daylight and at long distances, where other distance meters fall short. No more need for long measuring tapes outdoors – saving time and ensuring accurate measurements every time. The instrument is also equipped with a high-visibility digital color display, readable even outdoors, and measurements can be documented via Bluetooth through free app available for both iOS and Android. In addition to a digital angle meter – useful for tasks such as indirect height measurements – the instrument includes many standard features found in professional distance meters, such as tracking for continuous measurement, a Pythagoras function for indirect measurements like facade heights, addition/subtraction functionality, and a calculator for area and volume calculations. Delivered ready to use with carrying case, rechargeable battery with USB-C cable user manual and app for download.

Technical data:

Distance Meter

Rækkevidde:

150 m

Nøjagtighed:

2 mm @ 30 m

Regnefunktioner:

Vinkelmåler, Areal, Rumfang, Punkt til punkt, Addition/subtraktion

Lasers and Distance Meters

Type:

Cross Line Laser

Laser type (colour):

Green

Laser class:

Class II

Laser output:

1 mW

Tripod thread:

n/a
